Minecraft is undoubtedly one of the most popular games in the world. After its release, Minecraft created a new type of game genre called sandbox games, where players could create, change, or destroy their environment. Over time, the game evolved for a multitude of platforms including Windows, macOS, Linux, iOS and more. However, even after these years, the game was not developed for Chrome OS. But there is nothing to worry about as Chrome OS has Linux support. Now you can install and play Minecraft and many other Linux games on your Chromebook without much friction. So let's go ahead and look for steps to install Minecraft on your Chromebook using Linux. Install and play Minecraft on your Chromebook in 2021 Before we start, there are a few things I want to explain. You can run Minecraft on your Chromebook without moving into developer mode and installing Crouton. It can also be performed on a stable channel. The only thing you need to keep in mind is that you need Linux support on your Chromebook. Your school-issued Chromebooks won't be able to run Minecraft unless your administrator has enabled Linux support for your system. Recently, Google has brought in the ability to use Linux apps for school Chromebooks as well, but this will depend on your school administrator. 1. Before moving forward, make sure you have set up Linux on your Chromebook. To clarify briefly, go to the Settings page and click Linux (Beta) in the left pane. Now click on Turn on. Try to give more space to linux during installation. 2. Once Linux is installed, open The Linux Terminal. Just press the search key on your keyboard to find the terminal. Now open up. You can also open the App Drawer and search for Linux applications. That's where you'll find the Terminal. 3. Now run the following command. This will update your Linux to the latest build. sudo apt-get update &amp;&amp;sudo apt-get upgrade -y 4. After updating the Linux build, download the Minecraft.deb (Debian/Ubuntu) file from the official website. After that, move the file to the Linux files section within the Files app. 5. Now double click the downloaded file, and click the Install button. In a few minutes, Minecraft will be installed on your Chromebook. 6. Now to access minecraft press the Search key on your keyboard and look for minecraft. Finally open Minecraft Launcher. You can also go to Linux apps in the app drawer and open Minecraft Launcher. 7. Then sign in with your Mojang or Microsoft account. 8. After that click on the Play Demo at the bottom and will start downloading the latest release and install the update itself. The application will close after installation and will automatically reopen. In case this doesn't happen, manually open Minecraft Launcher from the app drawer. 9. Finally, Minecraft will open on your Chromebook and be ready to play. Simply click on Play Demo World and off you go to gameplay. 10. The game runs fine with WASD keys control, and now the sensitivity of the mouse is also pretty good. However, to adjust sensitivity, go to options -&gt; mouse settings and change the sensitivity to Hyperspeed. Now you can play Minecraft on the Chromebook smoothly and without tremors. 11. In addition, make sure that you enable the flag below if you want to lock the mouse pointer while playing minecraft on your Chromebook. Just copy and paste into the Chrome address bar and hit enter. Now enable it and restart your Chromebook. chrome://flags/#exo-pointer-lock 12. If you receive any installation errors, open the Terminal app from the app drawer.
